Subject Code: 24CSP-310

Q.1

The screenshot shows the DataLemur interface for a SQL interview question titled "Final Account Balance". The question is sourced from PayPal and is marked as "Easy". The interface includes a timer (0:00), navigation buttons, and a "Share" button. The question text asks for the final balance of accounts, considering deposits and withdrawals. The "Accepted" status is shown. The "Output" table displays the results for account IDs 301, 101, and 201. The "Expected" table shows the same results. The "Input" section contains the SQL query:

```
1 SELECT
2   account_id,
3   SUM(
4     CASE
5       WHEN transaction_type = 'Deposit' THEN amount
6     ELSE -amount
7     END
8   ) AS final_balance
9 FROM transactions
10 GROUP BY account_id;
```

Output

account_id	final_balance
301	62.00
101	25.00
201	26.00

Expected

account_id	final_balance
301	62.00
101	25.00
201	26.00

Input PostgreSQL 14

```
1 SELECT
2   account_id,
3   SUM(
4     CASE
5       WHEN transaction_type = 'Deposit' THEN amount
6     ELSE -amount
7     END
8   ) AS final_balance
9 FROM transactions
10 GROUP BY account_id;
```

Output

account_id	final_balance
301	62.00
101	25.00
201	26.00

Run Code Submit

Solution:

```
SELECT
account_id,
SUM(
CASE
    WHEN transaction_type = 'Deposit' THEN amount
    ELSE -amount
END
) AS final_balance
FROM transactions
GROUP BY account_id;
```
